

General Specifications

Model SC42 and FF40/FS40/FD40
2/4-electrode design for Conductivity Flow
fittings, Subassemblies and Immersion fittings

The measurement of specific conductivity in aqueous solutions is becoming increasingly important for the determination of impurities in water or the concentration measurement of dissolved chemicals. The accuracy of the measurement is strongly influenced by temperature variations, polarisation effects at the surface of the contacting electrodes, cable capacitances, etc.

Yokogawa provides sensors for pure water systems, general applications with a 2-electrode design and applications involving high concentrations of chemicals with a 4-electrode design.

To install conductivity sensors in a permanent or semi-permanent location, Yokogawa offers a wide range of flow and immersion fittings. A high degree of standardisation simplifies mounting, servicing and removal or replacement of the sensors.

Included are flow fittings and subassemblies for in-line or direct mounting of conductivity sensors in piping systems.

The immersion fittings are designed for tanks, open vessels or drains. PVC and stainless steel construction materials suit most process conditions, regarding chemical resistance, pressure and temperature specifications.

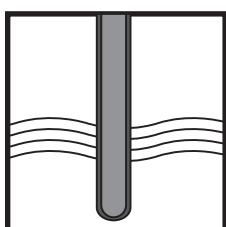

The fittings of stainless steel might be used in sanitary applications.

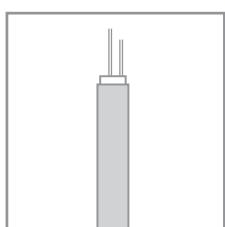

Features

- Wide range of sensors to suit most process conditions.
- High precision of the cell constant (Field calibration not necessary).
- Sensors for ultra-pure water applications.
- Built-in resistance thermometers Pt 1000 for automatic temperature compensation.
- Material certificate 3.1 according to EN 10024 for stainless steel sensors are always included.
- Optional quality inspection certificate.
- ATEX and IECEx.

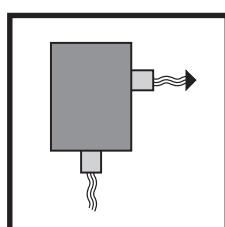

System Configuration

Cables

Fittings

Transmitters

Accessories

Plug-in flow sensors (SS)

Stainless steel cells for 2-electrode type with cell constants 0.01 and 0.1 cm⁻¹.

These conductivity sensors have a stainless steel body and PEEK (Poly Ether Ether Ketone) inner insulation for high pressure/temperature applications. A special treatment of the electrodes ensures optimal resistance against polarisation. The sensor includes a built-in resistance thermometer Pt1000 for automatic temperature compensation.

The combination sensor plug and cable socket is watertight and temperature resistant up to 100°C (212 °F). It meets the requirements of IP65.

The dimensions of the sensor are standardised for mounting in the standard fitting program of Yokogawa.

Features

- High precision of the cell constant (individually calibrated).
- Fast temperature response.
- High pressure/temperature specifications.
- Built-in resistance thermometer, Pt1000 RTD
- Plug-socket cable connection for easy installation and maintenance, meeting IP 65.
- Standardised dimensions for mounting in flow- and immersion fittings.
- Material certificate 3.1 according to EN 10014 are standard included (only wetted metal parts).

Typical Applications

1. Cell constant = 0.01 cm⁻¹

For measurement in very low conductive solutions like pure water, condensate, demineralised water, distilled water, etc.

2. Cell constant = 0.1 cm⁻¹

For measurement of low conductive solutions like boiler feed water, surface water, etc.

General Specifications

Materials

Wetted parts

- a. Body : Stainless steel AISI 3016L
- b. Insulation : PEEK (Poly Ether Ether Ketone)
- c. Electrode : Stainless steel AISI 316L
- d. Quad-rings, O-rings : Viton
- e. Connector : Gold plated contacts in polyamide plug

Weight and immersion length (L in figure)

Model SC42-SP24	: 440 gram; 110 mm (L)
Model SC42-SP34	: 600 gram; 163 mm (L)

Functional Specifications

Model	Temp. element	Cell-constant	Pressure rating	Max. temperature	90% Temp. response	Measurement system
SC42-SP34	Platinum resistor (Pt1000 to DIN)	0.01 cm ⁻¹	10 bar/142 PSIG	150°C/302 °F	< 1 min.	2-electrode system
SC42-SP24	Platinum resistor (Pt1000 to DIN)	0.1 cm ⁻¹	10 bar/142 PSIG	150°C/302 °F	< 3 min.	2-electrode system

The maximum pressure and temperature rating also depend on the actual process conditions. Under certain circumstances it is necessary to test the cell in situ. Additional data is available from Yokogawa.

Note: Stainless steel cells for 2-electrode systems with cell-constants 0.01 and 0.1 cm⁻¹ designed for pressure and temperature ratings of up to 40 bar (PSIG) at 250°C (°F) are available upon request.

Options

Certificate /Q : Quality inspection certificate
/M : Material certificate *3.1 Material certificate according EN 10204 is standard delivered with stainless steel version

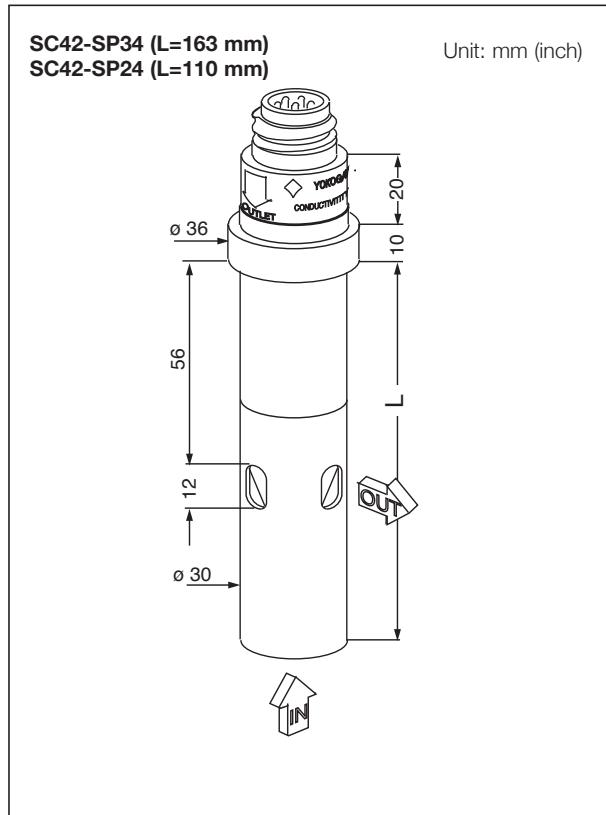

Figure 1 Flow type

Plug-in flow sensors (EPOXY)

Epoxy cells for 2- and 4-electrode type with cell-constants 1 and 10 cm⁻¹.

These conductivity sensors have a body of glass-filled epoxy resin. The electrodes are made from graphite impregnated with epoxy resin. This gives the sensors a good chemical resistance and a good reduction of polarisation effects.

Features

- Good chemical resistance.
- Choice in 2- and 4-electrode types.
- Easy installation

Plug-in flow sensors (PTFE and PVDF)

PTFE or PVDF shielded glass-platinum cells for 2- and 4-electrode type with cell constant 10 cm⁻¹.

These conductivity sensors are excellent suited for measurement in aggressive media. The (protection) body consists of PVDF (Kynar) or PTFE (Teflon with 25% glass filling).

The cell itself is made from highly resistant glass with platinum electrodes. The electrodes surfaces of the 2-electrode cells (SC42-P04) are further enhanced by gold plating to minimize the polarisation effects.

The internal sealing between the glass measuring cell and the PTFE/PVDF body (not visible in drawing) is by a KALREZ O-ring (high quality with excellent chemical resistance). A VITON O-ring is supplied with the sensors for sealing the cell in the fitting (visible in drawing). For measurements in strongly oxidizing acids an optional KALREZ O-ring is recommended.

Features

- Excellent chemical resistance for applications in aggressive media like oleum, concentrated mineral acids, etc.
- Suitable for measurement of highly conductive, strongly polluted solutions.
- Optimum results by gold plating (of 2-electrode version) against polarisation effects.

Typical applications

- PTFE-cell : Concentrated mineral acids such as: oleum, nitric acid, hydrochloric acid, etc.
 PVDF-cell : All aggressive media with the exception of strongly oxidizing agents.

Note: See the chemical resistance list in table 1.

Insertion Sensors

Insertion sensors for 2-electrode type with cell constant 1cm^{-1} .

The insertion sensors are especially useful in applications where a representative sample flow through the sensor cannot be achieved easily (e.g. in liquids containing solids, direct measurement in pipe-lines). The electrode surfaces are easily accessed for cleaning or maintenance. The model SC4.-EP16 is especially designed for direct mounting in sanitary piping systems. It has a collar piece suitable for mounting with DN 25.

Features

- No obstacles in the flow-line by short immersion length.
- Easy cleaning.
- Good chemical resistance.
- Low polarisation distortion.

In addition to that the model SC42-EP16 can be directly fitted with a DN25 swivel.

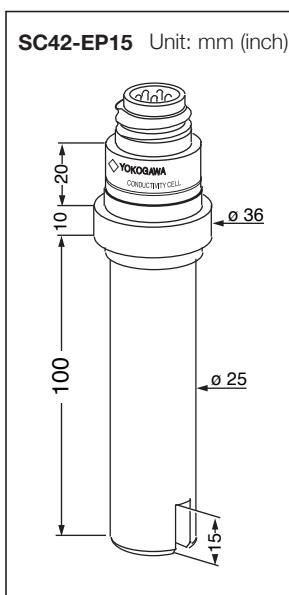

Figure 6 Insertion type

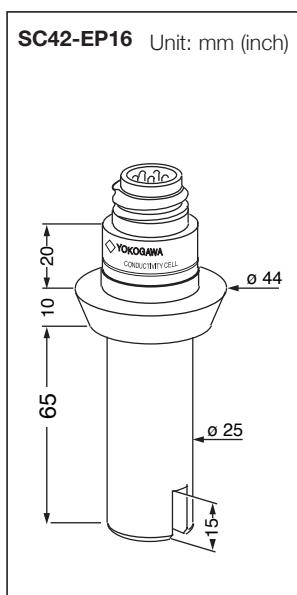

Figure 7 Insertion type (sanitary)

Applications

For measurement of moderate conductive solutions like surface water, waste water, salt solutions, etc.

Selection Criteria

In considering the required sensor, please check all four points listed hereafter:

- The pressure and temperature requirements are within the limits of the cell.
- The selected materials (wetted parts) have a good resistance to corrosion according to practice or table 2.
- The conductivity value at the process temperature is within the application range of the cell (see table 1 on t page 12).
- A selection is made between 2- or 4-electrode measuring system (see figure 8).

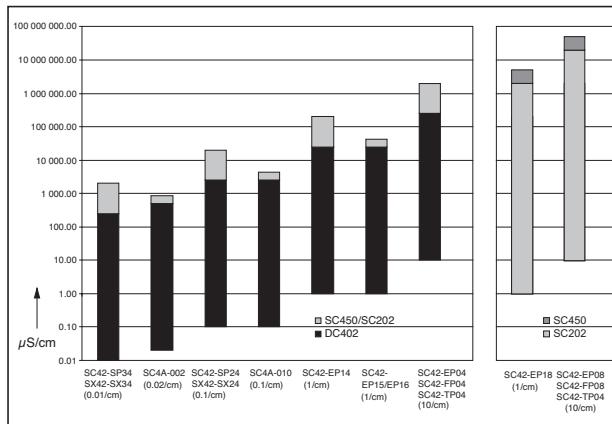

Figure 8 Rangeability of conductivity sensors

Model FF40/FS40 flow fittings and subassemblies for conductivity measuring loops

To install SC42 conductivity sensors in a permanent or semi-permanent location Yokogawa can supply a range of flow and immersion fittings.

A high degree of standardisation simplifies mounting, servicing and removal or replacement of the sensors.

The program includes flow fittings and their subassemblies for in-line or direct mounting of conductivity sensors in piping systems.

A wide choice of construction materials gives the user the best solution for any process considering chemical resistance, pressure and temperature specifications Refer figure 10.

Features

- Wide choice of construction materials.
- High degree of standardisation for all cells.
- Easy mounting, service and removal of sensors.
- Electrolytically polished stainless steel designs for optimal corrosion resistance.
- Available with flange adapters.

A. Flow Fittings

From a practical point of view, the best mounting place for conductivity sensor is in a by-pass with a sample valve. For these applications the flow fittings / subassemblies are ideal.

Features

- Easy mounting and maintenance of the sensors.
- Changeable liquid outlet position (right or left).
- Wall mounting bracket.
- Blanking plug for mounting and test applications.

B. Subassemblies

The subassemblies are designed for mounting conductivity sensors in a tank wall or directly into a piping system. They can be easily mounted in the process piping by welding, cementing or screwing.

The stainless steel subassemblies meet the requirements of DIN 11850 and DIN 11851 for sanitary constructions.

Features

- Suitable for mounting in a T-piece or directly in the piping system.
- Designs for mounting the plug-in type sensor and the insertion type sensor with collar piece DN 25 (D-model).

Ordering Instructions

When ordering, specify model and code, item name and part no.:

1. Flow fitting : FF40-P22, FF40-S22 or FF40-V22
2. Subassembly : FS40-F22-..., FS40-S22-..., FS40-V22-... or FS40-S23-DF
3. Sensor cable, if relevant : WU40-LH01, WU40-LH02, WU40-LH05, WU40-LH10, WU40-LH15, WU40-LH20 and WU40-LH25.
4. Connecting box/connecting cable (only when converter is installed a distance from the fitting) : BA10/WF10 or BP10/WF10 (IS Design)
5. Accessories : Part name and part number (quantity)
6. Service parts : Part name and part number (quantity)

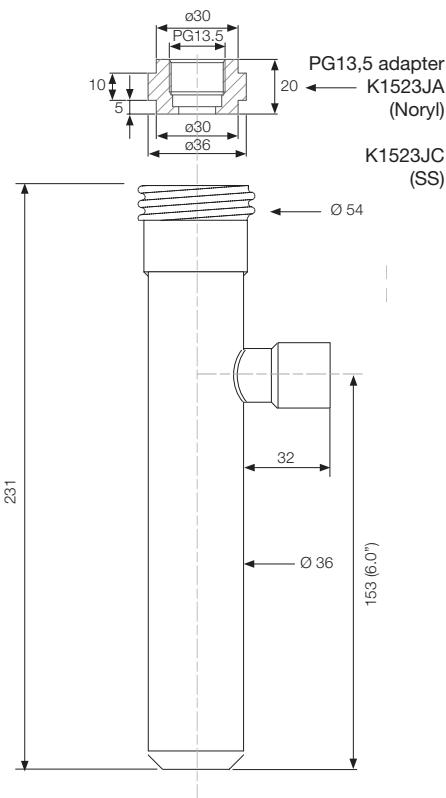

Figure 16 Description K1523JA / K1523JC

Description: Adapter to fit sensors with a PG13.5 process connection in FF40/FS40 and FD40 fittings. Material: Polypropylene

Model FD40 Immersion Fittings for conductivity measuring loops

For installing conductivity sensors in a permanent or semi-permanent location, the program of Yokogawa includes a range of flow and immersion fittings.

The immersion fittings are for installing conductivity sensors in tanks, open vessels or drains. The constructions of PVC and stainless steel suit most process conditions, considering chemical resistance, pressure and temperature specifications. The fittings of stainless steel might be used in sanitary applications. A mounting flange can be ordered.

Features

- Designed for mounting conductivity sensors in tanks, open vessels and drains.
- Easy mounting, service and removal or replacement of sensors.
- High pressure and temperature specifications.
- With or without flanged connection.
- Stainless steel construction for sanitary applications.
- Several lengths available.

From a practical plant aspect, the immersion fittings should be installed in a site, where the point of measurement truly represents the entire solution. Avoid areas where the measurement varies significantly. If the fitting is mounted in a tank with agitator, or if it is placed in a fast flowing process, care must be taken that the fitting is adequately supported. Select a mounting place where the sensor is always immersed in the process liquid.

WU40-LH10	Sensor cable (10 m)
K1500AB	Cable gland 1/2 inch NPT (10)
K1500AX	Flexible conduit, 10 meter
K1500EM	/PH25 for immersion holders
K1500DN	/PH03 protection hose, 3 meter
K1500DP	/PH05 protection hose, 5 meter
K1500DQ	/PH10 protection hose, 10 meter
K1500DR	/PH15 protection hose, 15 meter
K1500DS	/PH20 protection hose, 20 meter

Service Parts

Part no.	Description
K1500FX	5x O-rings for mounting the sensor in a fitting
K1500FY	5x O-rings (Silicone) for sealing the cell
K1500AH	1x O-rings (KALREZ)
K1541ZY	/MS1 for FD30 / ISC40FD and FD40

O = can be used

X = shortens useful life

- = cannot be used

Note: There are many variables affecting corrosion, making it virtually impossible to compile a conclusive corrosion table applicable under all possible process conditions. The indications in table 2 cannot be used as a recommendation by Yokogawa for the choice of materials. The selection of a suitable material is the sole responsibility of the user. Yokogawa disclaims any reference to this leaflet on that basis.
